Education

Rajiv Gandhi Institute of Technology — Andheri, Mumbai
Bachelor of Engineering in Information Technology | CGPA-9.72 — *Nov. 2021 – May 2025*

St. Peter College of Science — Vasai, Mumbai
Higher Secondary Schooling — *Aug. 2019 – May 2021*

Work Experience

Software Engineer — July 2025 – Present
Acies LLP — *Goa, India*

- Built a multi-tenant Admin Center using **React** and **Django** for centralized management of user roles, permissions, authentication, application deployments, and database connections.
- Implemented secure authentication and account management with **Django Allauth**, supporting **SSO**, **SAML**, **LDAP**, and **MFA** across tenant environments.
- Developed application deployment workflows for package upload/download, with comprehensive audit logging for traceability and compliance.
- Engineered the **FastAPI** backend for **Revolutio BI**, a multi-tenant analytics platform, developing report, chart, and workspace APIs using **PostgreSQL** for core data and **CouchDB** for dynamic report/chart configurations. Contributed to the data aggregation engine responsible for transforming and serving data to power interactive dashboard visualizations.
- Strengthened platform security by identifying and remediating backend/InfoSec vulnerabilities using Burp Suite, covering authentication, authorization, API security, input validation, and access controls.

Software Developer Intern — August 2024 – November 2024
Digitrix Agency — *Vasai, Mumbai*

- Contributed as a core frontend engineer on **LearnLand**, an AI powered interacting teaching platform, driving feature development, performance optimization, and production readiness.
- Architected the end-to-end frontend interaction flow and delivered a responsive web application using **TypeScript**, **Next.js**, **Tailwind CSS**, and **Zustand**, integrated with **Python/FastAPI** backend services.
- Led performance optimization for high-latency networks, **significantly improving initial load times** and overall responsiveness across devices.
- Collaborated closely with product, design, and backend teams, understanding architecture requirements and contributed to debugging, testing, and production readiness.
- Participated in code reviews and feature discussions, gaining hands-on experience with software development best practices.

Projects

Workflow Automation Platform | *Next.js, Turborepo, Prisma ORM, TypeScript, Express.js* — September 2024

- Built **FlowForge**, a Zapier-style workflow automation platform with **webhook triggers** and **Email/Solana** actions
- Implemented secure authentication with **Argon2id** password hashing, email verification, **HttpOnly sessions**, **refresh-token rotation**, and password recovery.
- Designed versioned workflow lifecycles with drafts, publishing, pausing, archiving, **immutable execution snapshots**, **retries**, **leases**, **dead-letter handling**, and **replay**.
- Developed a **Kafka**-based **transactional-outbox** pipeline with **PostgreSQL** persistence, **Docker Compose** deployment, **OpenAPI** documentation, and automated TypeScript/test coverage.
- Created an interactive workflow builder with drag-and-drop ordering, keyboard-accessible controls, autosave, connector validation, **run history**, **payload inspection**, and **failed-run replay**.

Inkwell - Blogging Website | *React.js, Cloudflare Workers, Prisma ORM, Tailwind CSS, TypeScript* — March 2024

- Built a full-stack blogging platform using **React.js**, **TypeScript**, and **Tailwind CSS**, following modern functional-component and React Hooks patterns.

- Developed and deployed an **auto-scaling serverless backend** with Cloudflare Workers and hosted the frontend on **Vercel**.
- Implemented secure **JWT-based authentication** and **authorization** for protected user and content-management workflows.
- Integrated **Prisma ORM** for database operations and schema migrations, along with **skeleton loading states** to improve perceived performance and user experdience.

Makeit - A token launchpad | *React, Solana Wallet Adapter, Web3.js, Tailwind CSS* December 2024

- Designed and developed an advanced token launchpad on the **Solana** blockchain, streamlining token creation with seamless metadata and image integration.
- Enabled users to upload token metadata and images directly from their local machines, stored securely on **IPFS** for decentralized accessibility.
- Simplified token deployment for non-technical users, reducing deployment time by **up to 40%** compared to traditional platforms.
- Among the top **5%** of Solana-based launchpads offering integrated IPFS storage and **Token-22** compatibility.

Technical Skills

Programming Languages: Java, Python, JavaScript, TypeScript
Frontend Development: React, Next.js, HTML, CSS, Bootstrap, Tailwind
Backend Development: Node.js, Express.js, Flask, Django, FastAPI
Database Systems: PostgreSQL, MySQL, MongoDB, Redis, CouchDB
Developer Tools: Git, Docker, VS Code, PyCharm, IntelliJ, Postman, Remix
Cloud Platforms: AWS, GCP, Cloudflare
Testing: Vitest, Jest, Cypress

Certifications & Training

The Complete 2024 Web Development Bootcamp | *Full-Stack Development, Web Development*

AWS Cloud Technical Essentials | *Cloud Computing*

Foundations of Cybersecurity | *Information Security, Cybersecurity*

Postman API Fundamentals Student Expert | *Application Programming Interfaces (API)*

Play It Safe: Manage Security Risks | *Security Audits*
